We claim:

1. An isolated DNA molecule encoding a mammalian islet cell neogenesis associated protein (INGAP) protein, wherein the INGAP protein has the amino acid sequence shown in SEQ ID NO: 2.

2. The DNA molecule of claim 1 wherein the INGAP protein has the nucleotide sequence shown in SEQ ID NO: 1.

3. A vector comprising the DNA of claim 1.

4. The vector of claim 3 further comprising expression control sequences, whereby said DNA is expressed in a host cell.

5. The vector of claim 4 which comprises a EBNA His plasmid.

6. A host cell transformed with the DNA of claim 1.

7. A host cell transformed with the vector of claim 3.

8. The host cell of claim 6 which is a cos7-African-Greener Monkey kidney cell.

9. A nucleotide probe comprising at least 30 contiguous nucleotides of a sequence encoding a mammalian islet cell neogenesis associated protein (INGAP), wherein said protein has the sequence shown in SEQ ID NO: 2.

10. The nucleotide probe of claim 9 wherein the mammalian INGAP gene has the sequence shown in SEQ ID NO: 1.

11. The nucleotide probe of claim 9 wherein said probe is labeled with a detectable moiety.

12. A DNA molecule comprising at least 30 contiguous nucleotides of a sequence encoding a mammalian islet cell neogenesis associated protein (INGAP), wherein said protein has the sequence shown in SEQ ID NO: 2.

13. The DNA molecule of claim 12 wherein the mammalian INGAP gene has the sequence shown in SEQ ID NO: 1.

14. The DNA molecule of claim 12 wherein said molecule is labeled with a detectable moiety.

15. A method of producing a mammalian INGAP protein, comprising the steps of:

providing a host cell according to claim 6;
culturing the host cell in a nutrient medium so that the INGAP protein is expressed; and
harvesting the INGAP protein from the host cells or the nutrient medium.

16. A method of producing a mammalian INGAP protein, comprising the steps of:

providing a host cell comprising the DNA molecule of claim 1;
culturing the host cell in a nutrient medium so that the mammalian INGAP protein is expressed; and
harvesting the mammalian INGAP protein from the host cells or the nutrient medium.

17. An antisense construct of a mammalian islet cell neogenesis associated protein (INGAP) gene comprising:

a promoter, a terminator, and a nucleotide sequence consisting of a mammalian INGAP gene, wherein the gene encodes a protein as shown in SEQ ID NO: 2, said nucleotide sequence being between said promoter and said terminator, said nucleotide sequence being inverted with respect to said promoter, whereby upon expression from said promoter an mRNA complementary to native mammalian INGAP mRNA is produced.

18. The DNA molecule of claim 1 wherein the INGAP protein is from human.

19. The DNA molecule of claim 1 which comprises nucleotides 4 to 268 and 389 to 629 of SEQ ID NO: 1.
